

Amendments to the Abstract:

~~An electric power demand prediction service method and a system therefor may derive an estimated value and/or predicted value of electric power demand of an arbitrary customer group and provide the derived information to electric power suppliers.~~ The An electric power demand prediction service method, in supplying and system in which electric power is supplied from an electric power supplier to an energy consumer, includes steps of connecting a demand prediction service provider to the power supplier supplying electric power which supplies to the energy consumer through a communication circuit, receiving electric power demand and supply record data which is measured and collected by the electric power supplier, performing a prediction calculation of the demand power to be supplied from the electric power supplier on the basis of the received record data so as to produce power demand prediction data, and delivering the power demand prediction data to the electric power supplier. ~~A, calculating a charge for the service of producing the prediction data to for the electric power supplier is calculated, and delivering a result of the charge calculation process is delivered to the electric power supplier.~~
